

**Q2 2022**
**JIRA Integration Improvements\***

Risk Object	Issues Object	Product Object	2 way sync: Tasks
	Exceptions Object	Vendor Object	Requests: Push to multiple Projects

**API Improvements\***

Threat Object APR '22	Objective Object APR '22	Market Object APR '22	Control Object APR '22	Exceptions Object
Expose Event Log* APR '22			Create generic mapping endpoint for relationships	

- \***JIRA Integration Improvements** - We are expanding 2-way syncing of objects between ZenGRC and JIRA to work with more objects. In addition, we will be allowing Requests to be pushed to multiple Projects in JIRA.
- \***API Improvements** - We are adding additional support for reading from and writing to more objects via the API. We are also allowing mapping of any object to any other object via the API, just like how it can currently be done in the web UI.
- \***Event Log** - We are adding an endpoint to allow you to fetch event log data via the API.
